SUMMARY

Data Analyst with an MBA in Business Analytics, currently working on Business Intelligence and reporting at SVLL. Built a Power BI dashboard that pulls seven Oracle modules into one live view using SQL, Power Query and DAX, replacing 2 to 4 hours of daily manual work in Excel. Comfortable writing complex SQL, cleaning and automating data in Python, building data models, defining KPIs and running funnel analysis, and explaining the results to people who don't work with data.

TECHNICAL SKILLS

SQL & Databases: Oracle, PostgreSQL, Joins, Subqueries, CTEs, Window Functions, Aggregations, Query Optimisation & Tuning, Database Management, Large Datasets, RDBMS Concepts

Programming & Tools: Python (Pandas, NumPy, Matplotlib), Data Cleaning & Automation Scripts, Jupyter Notebook, Git, GitHub, VS Code, Oracle APEX

BI & Visualisation: Power BI (DAX, Power Query / M, Data Modelling, Star Schema, Calculated Columns & Measures, Slicers, Drill-Through, Scheduled Refresh, Power BI Service), Tableau, Advanced Excel (Pivot Tables, Power Pivot, XLOOKUP, INDEX-MATCH, Dynamic Dashboards), Google Sheets

Data Handling: Data Extraction & Transformation (SQL, Power Query), ETL Logic, Multi-Source Integration, De-duplication, Data Validation, Data Quality & Governance, Solution Documentation

Analytics & Business: KPI Definition & Standardisation, Funnel & Conversion Rate Analysis, Trends & Insights, Root-Cause Analysis, Segmentation, Turnaround-Time Analysis, EDA, Statistical Analysis, Requirement Gathering, Business Stakeholder Communication, Cross-Functional Collaboration, Scalable Reporting, Process Automation

EXPERIENCE

Data Analyst | SVLL

Jul 2026 - Present

- Replaced a daily 2 to 4 hour manual Excel process with a live Power BI dashboard by consolidating 7 Oracle modules (Loading Plan, Vehicle Placement, LR, POD, WhatsApp POD, POD Receipt, POD Follow-up) into one optimised read-only SQL query, saving an estimated 10 to 15 man-hours per week.
- Designed the ETL and data model layer in Power Query (M), delivering 32 validated fields across 62 client depots with auto-rolling date logic, 80+ exclusion rules and LEFT JOIN matching that exposed pending PODs the same day instead of at month end.
- Wrote 20+ DAX measures and status columns (LR Pending, POD Pending, Average Lead Days, Average Delay Days, On-Time vs Delayed) driving a KPI monitor with 10 slicers, zone views and record-level drill-through, removing number mismatches between branches.
- Documented the full solution (architecture, business rules, 32-field data dictionary, DAX logic, refresh and security) in a report reviewed by the IT team and submitted for CEO sign-off.

Data Analytics & Reporting - Digital Marketing Intern | VNR Seeds

Jun 2025 - Aug 2025

- Cleaned and validated 10,000+ farmer records in Python (Pandas), Excel and Google Sheets by standardising formats, removing duplicates and resolving missing values, improving reporting accuracy by an estimated 20%.
- Analysed 50,000+ customer interactions across digital channels in Excel and Power BI, building segmentation logic that identified 3 high-engagement segments later used to shape targeting strategy.
- Ran funnel and conversion analysis on 5,000+ leads across pipeline stages, isolating the stage with the highest drop-off at roughly 40% and presenting recommendations to the commercial team.

PROJECTS

Recruitment & HR Analytics Dashboard | Power BI, DAX, Power Query, Excel

Jul 2026 - Aug 2026

- Built a 6-page Power BI reporting solution covering HR key overview, recruitment dashboard, candidate and offer details, Below Manager and Above Manager position tracking, and recruiter performance.
- Created DAX KPIs for requisitions, open positions, applications, shortlisted profiles, interviews, offers, selections and joined candidates, backed by Power Query transformations and a structured data model.
- Modelled the recruitment funnel to track movement from requisition through offer, acceptance and joining, and measured hiring-stage turnaround time to expose where candidates were getting stuck.
- Analysed recruiter-wise performance on profiles shortlisted, interviews conducted, selections and days taken to close, with slicers for department, location, status, allocated person and date, plus requisition-level detail for operational follow-up.

Patient Appointment No-Show Analysis Dashboard | Python, Power BI, DAX, Excel | [View on GitHub](#)

Apr 2026 - May 2026

- Processed 111K+ healthcare appointment records in Python (Pandas) with feature engineering and data-quality checks to support patient segmentation.
- Built a Power BI dashboard tracking no-show rate, demographics and waiting-time bands, and found that patients waiting over 7 days were 2x more likely to miss appointments, supporting a scheduling change.

EDUCATION

MBA, Business Analytics & Marketing | ICFAI University

2024 - 2026

PG Diploma in Computer Applications (PGDCA) | Kalinga University

2023 - 2024

Bachelor of Commerce (B. Com) | MAIC

2020 - 2023

CERTIFICATIONS

IBM Data Analyst Professional Certificate | Coursera

2026

Microsoft Power BI Data Analyst Professional Certificate | Coursera

2026

Deloitte Data Analytics Job Simulation — Forage

2025
